Subject: Bradford Island clean-up?

Hello, I received a copy of an email from Jeremy Buck - nice to meet you via email, Jeremy - to a colleague requesting information about ESA listed species in the vicinity of Bradford Island. That email string also included a Yakama email address which I have included in this distribution. I've also copied Ken Marcy of EPA - nice to meet you too Ken - who was in that string. I hope that covers the bases.

Anywhoooooooo, we refer people to our website for species lists and critical habitat information. However, species in the immediate project vicinity include all Columbia River (upper, middle and lower Chinook, steelhead, and chum) and Snake River (fall Chinook, spring/summer Chinook, steelhead, and sockeye) salmon and steelhead ESU's and DPS's, respectively. Critical habitat is also designated for these species and that habitat includes the clean-up site. Eulachon also sometimes occur in the vicinity, but their critical habitat does not extend upstream of Bonneville Dam.

Please feel free to contact me if you have further questions. Thanks.
